

BMR Grazing Blend

The **BMR grazing blend** produces additional grazing days. It is a set blend of BMR sorghum sudangrass hybrids. With the different growth pattern of this blend it can produce 60-100 days of grazing. Daily gains are improved from a high level of digestible fiber and sugar. Intake is excellent as the BMR 6 increases palatability. Begin grazing at 18 -24". Use rotational grazing and stocking rates of 2-3 head per acre under dryland or rainfed conditions. Regrowth following grazing or cutting is improved.
